our transparency is visible

Radical Industrial Design and a
modular platform with endless
possibilities.

 ZANASI

 **ZANASI**
make your mark

The new challenges of the market

The production industry has become liquid and subject to constant change, thus it requires flexible solutions.

A dynamic marking experience responds quickly to market demands and looks to the future, for an actual implementation of the Industry 4.0 principles.

Cost control

Scaled business budgets need to include an increasing number of services and products. Decision-makers are being forced to make increasingly conscious choices towards comprehensive and adaptable solutions to maximise return on investment.

Ease of use

Industry margin squeezing requires easy-to-use tools, with advanced built-in features that simplify and reduce operators' day-to-day tasks related to maintenance and the changing of consumables.

Productivity optimisation

Solutions must be reliable and maintain consistent performance over time to reduce operating costs, downtime and unforeseen events that have the greatest impact on the company's assets, causing serious economic losses.

The only answer is CIJ.Z

CIJ.Z radically changes the concept of the product from default to modular.

A marking system that can be configured with the features essential to your coding process and remodulated to adapt to the production changes and technological innovations of tomorrow.

Make your printer

A **SINGLE** system with endless possibilities

TAILORED TO THE OPERATOR

Intuitiveness and ease of use are supported by the radical Industrial Design, developed according to a functional design logic to guide and simplify user experience in order to increase usage efficiency.

RELIABLE

Guided features, self-regulation processes and reduced parts subject to maintenance reduce downtime, ensuring the stability and efficiency of the system.

TRANSPARENT

The modular platform guides in the choice of individual parts during the purchase and updating of the product, ensuring certain costs at any time, for a conscious choice according to requirements, without compromise.

Remake your printer

Value over time and technology without expiry!

The printer modules are interchangeable and can be added or replaced to update product characteristics and to maximise the technology made available.

CIJ.Z

the Transparent Solution

Guided maintenance at cost 0

Parts subject to routine maintenance are transparent and visible in their functionality, for easy replacement without errors or tampering.

OPTIMISED HYDRAULIC SYSTEM

The hydraulic monoblock is minimised, the filter variable and the mixing variable are separated and individually removable.

FILTER ADAPTED TO YOUR PRODUCTION

Different models depending on the working hours and the use of the printer, without having to pay higher costs during purchase or maintenance.

SMART AND TRANSPARENT CARTRIDGE

The level of ink is visible and the replacing is controlled by the system through NFC technology that recognises and configures the cartridge and avoids exchanges between different types of ink or solvent cartridges.

*A cartridge made with 50% less plastic

ALWAYS CLEAN SYSTEM

A gasket seals the cartridge to prevent ink leakage.

*compared to ink containers on the market

Radical Industrial Design where the internal and external components of the printer, the hydraulic system, the cartridge and the printhead are all «transparent» elements, visible in their functionality. The individual parts are assembled on a platform that recognises the different modules and returns a unique and personal product.

CABINET WITH HIGH STANDARDS

Sealing and the perfect protection from water jets make the system waterproof during the sanitization process of the line.

The degree of IP protection adapts to the new environmental requirements and can be increased after purchase, WITHOUT REPLACING the system.

INTERCHANGEABLE NOZZLE PLATE

The particular design of the nozzle plate has been created to customise the head according to the height and printing speed required, adapting the ink consumption to the actual conditions of the production process.

CLEAN AND PRECISE CODING

Simply replacing the nozzle plate, available in the 50µm and 65µm versions, reconfigures the head according to new print resolution or speed requirements.

THE FLEXIBILITY OF THE 90° PRINthead

The head reaches the tightest spaces and can be adjusted for any type of integration.

270°

*Printing speed increased by 56%

*compared to previous generation models

Industry 4.0

The connections are multiple and can be activated and extended based on the different online devices. Individual interconnection functions have been developed according to the Industry 4.0 requirements.

SMART FACTORY

ALWAYS INTERCONNECTED

The advanced connection characteristics and the software designed to interact with online devices or internal management and control systems simplify integration and data exchange and reduce costs related to the introduction of new tools.

Modular connectivity block

UMBILICAL CORD WITH 90° ATTACHMENT

The attachment on the back reduces overall dimensions in depth for easy fitting inside confined spaces.

Orkestra Software

The Orkestra interface detects and decodes data from other devices without the need for external decoders, simplifying integration and reducing customisation costs.

MODULAR SOFTWARE WHICH CAN BE UPDATED DOWN TO THE SINGLE FUNCTION

The **Orkestra** software platform can be configured with modules dedicated to specific activities. The editor, configuration, reporting and data transfer modules are developed according to proven usability logics to adapt to the operator's level of experience.

FEWER ERRORS, HIGHER PRODUCTIVITY

The touch user interface facilitates interaction and the editor is designed to automate the creation of standard messages, limiting data entry solely to the variable field. Each message will be parameterised and stored according to the specific needs of each production process.

Industrial Design tailored to the operator

The ergonomic line uses a contrasting combination of colors and shapes to divide the front and body of the machine and to map the important points of interaction with the digital interface and the physical parts of the marker.

The display slightly tilted towards the operator invites to interact with the system.

The front part is dedicated to ordinary activities such as switching on, opening of the door or insertion of the cartridges.

Reduced interactions

THE OPERATOR AT THE CENTER OF THE PROJECT

Ease of use is the basis of the project with a functional design logic that instinctively activates a physical action on the device and automates repetitive actions.

*Training time reduced by 70%

TOUCH & GO. IMMEDIATE RESTARTS

A simple touch of the screen awakens the printer. CIJ.Z is designed to keep the main functions always active even after switching off, ensuring quick restart.

*verified by our main customers

Maximum
productivity
remotely

Reports & Data Analysis

The printer becomes an intelligent data collection resource

- Production reports
- Performance indicators
- Detection of inefficiencies

Remote diagnostics

Remote support for restore in case of shutdown

- Telephone support
- Anomaly monitoring
- Parameter setup for correct operation

Productivity optimisation

Remote management, control and monitoring of multiple printing systems within the same plant from a PC or laptop.
